

Build Tooling

A Complete 9-Chapter Web Development Course

Topics covered:

- Why build tools exist & module bundling concepts
- Webpack, Babel/tsc transpilation & source maps
- Vite's dev-server-first approach & why Go/Rust tools are faster
- CSS in the build pipeline & production optimization

Exercises: 27 hands-on challenges with worked solutions

Format: A4 · Dark-theme code examples

Single standalone course · the invisible layer between code you write and code the browser runs
